

LINGEE SPARKS YOUR MIND WORK FEELS KIND

Lingee

CFO morning briefing is ready: We'll have a 420k cash flow gap in 7 days, with two receivables over 30 days past due.

Make cash flow our top priority. Let me know your solutions.

Lingee

Payment plan rearranged, receivables collection launched. Payroll and tax funds have been reserved.

Well done, keep following up.

Core Scenario 1

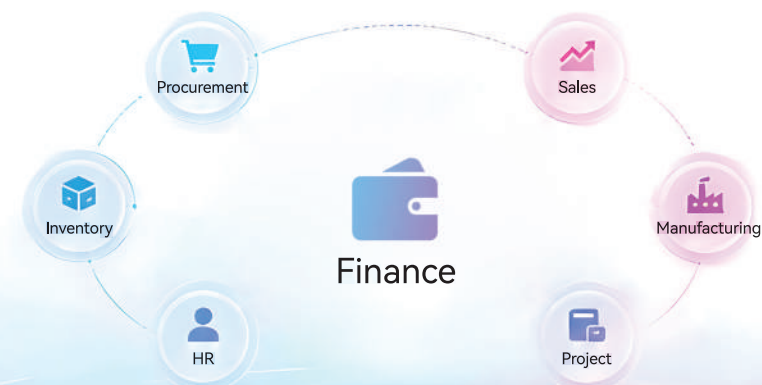

AI-Native Finance

With finance at the core, enabling real-time connectivity across business value streams

Finance is no longer merely a recorder after the fact; it now participates in judgment as business occurs, manages risk, distills data, and informs decision-making

10+
Finance Agents

24/7
On Duty

Only when finance is redefined
can enterprise value streams be truly transformed

Core Scenario 2

Lingee Build

New-Generation Enterprise AI-Native Development Platform

Driven by intent, rapidly build business-aware skills, agents, and apps. This enables more people across the organization to create applications that integrate natively with Lingee ecosystem

Prototype Exploration

Generate interactive prototypes within minutes from natural language or sketches

App Development

AI understands business intent and generates enterprise-grade applications

Skill Development

Package business capabilities into reusable skills

Agent Development

Combine multiple skills to build deployable digital workers

Not just code
but operational, governable, and distillable
AI-native capabilities

Lingee

AI-Powered Management
With Kingdee

Built for the AI-Native Era by Kingdee

Lingee

Enterprise AI Operating System

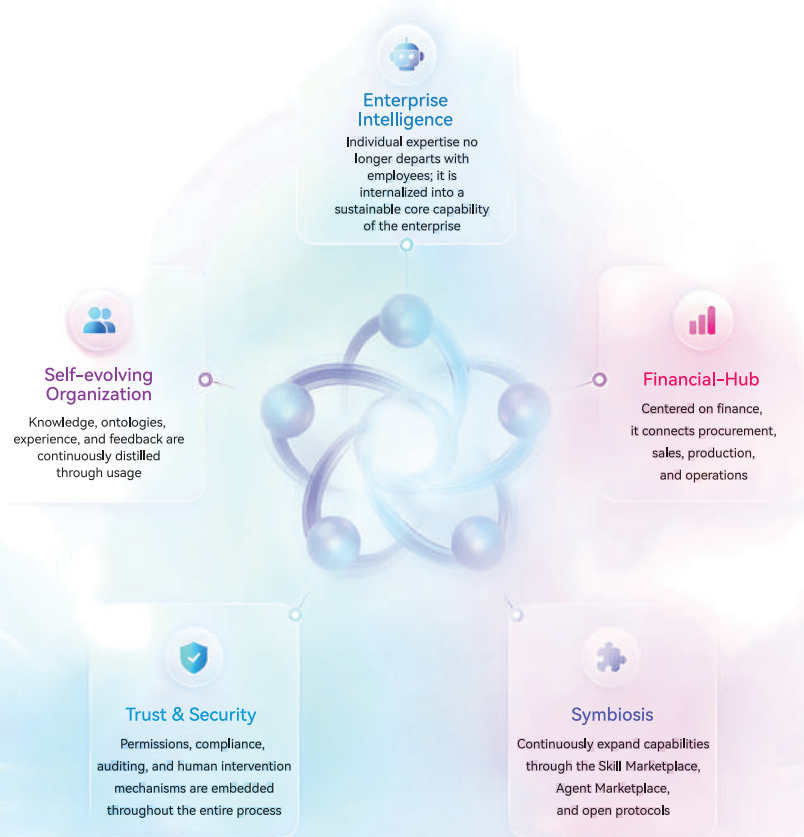

Powered by AI-native technology, Lingee delivers a full suite of capabilities covering agent development, orchestration, execution, governance and ecosystem interoperability. It helps enterprises build system-level intelligence, empowers every employee to become a super-capable contributor, and unlocks new frontiers for business growth

*This brochure was produced by Lingee under the guidance of human designers

Make AI the Core Driver of Enterprise Productivity

It connects large models, enterprise knowledge, business systems, agents, skills, and governance rules, enabling AI not only to answer questions, but also to execute reliably, learn continuously, managed and trusted within enterprise workflows

Six-Layer Architecture

Support Stable AI Operations in Enterprises

From model integration and knowledge ontology to agent development, operations, governance, and ecosystem interoperability, Lingee supports the full end-to-end enterprise AI value chain

Enterprise AI is not merely about connecting to a single model. It is about enabling AI to understand the business, invoke tools, operate with authorization, remain auditable, and scale sustainably

Chat · Work · Build

From intuitive use, to role-based operation, to capability creation

Lingee serves as an AI work entry point for everyone, an agent operating platform, and the development foundation for enterprises to build AI-native applications

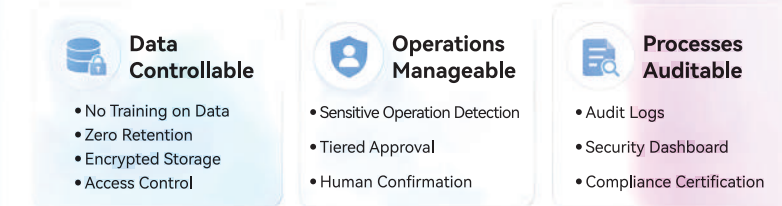

Trusted Operations, Open and Symbiotic Ecosystem

True enterprise-grade AI must run reliably in an environment that is authorized, auditable, and intervention-ready

Lingee builds a secure and trustworthy framework around data, identity, permissions, tool invocation, Agent operations, and audit traceability, while continuously expanding enterprise AI capabilities through an open ecosystem

01 Trusted Operations

02 Open Ecosystem

Bring AI into the core of enterprise operations and continuously create value within clear boundaries
